- Do your company need Product Hierachy? Feel free to contact our support staff.Fully Dynamic & Customizable

Xeersoft recognize that our customers come from a diverse group of company, people and country with different business need and usage. Therefore, Xeersoft introduces a fully customizable Language, Theme, Access and Permission Packages.

Administrator Level Users can now customize Xeersoft pages directly by turning on Edit Page mode in Setup and Utilities.

Multilanguage and ShortText - Xeersoft enables users to modify any and all text within Xeersoft System to accomodate your company's own business language and usage.- Xeersoft supports any language from Mandarin to Latin, enabling users to customize for each individual user need.

Access Authorization- Xeersoft allows users to set their own user access permission to Xeersoft.- Different user roles could be set to access only their functional menu and pages.- This fully functional access authorization would ensure that only authorized personel have access to sensitive information and data.

Permission Authorization - Each company have their own organization charts, each person with their own role and responsibilities. - Xeersofts enables companies to define their system according to their organization's role structure. - This powerful customisable capability would ensure each user their own scope of responsibility while restricting sensitive data and functionality level to only entrusted staff. - A simple example would be: A salesman can view orders, but cannot delete. Only managers can delete orders.

Customize Your Xeersoft Theme- Users of Xeersoft can now change their Xeersoft Theme to suit their colour scheme.- Companies could customize the colour to follow their official company scheme or users can set a different theme according to their colour preference.- More then 15 themes available to be choosen from. If these themes do not suit your needs, users can customize their own!
